Yesterday's support model cannot keep up

IT teams face fragmentation, skills pressure, and rising expectations.

Fragmented visibility

- Multiple portals, tools, and APIs create blind spots
- Incomplete inventory across environments
- Signals exist but are missed before impact

Reactive firefighting

- Work starts only after disruption hits
- Engineers carry high cognitive load
- Little capacity left for innovation

Context restart tax

- Teams re-explain the same environment repeatedly
- TAC often starts cases from zero
- Resolution cycles stay slow and expensive

Aging risk exposure

- ~40% of top-targeted vulns hit EOL devices
- Misconfigurations drive a large share of outages
- Prioritization happens without clear evidence

What is Cisco IQ?

Cisco IQ is an AI-powered digital platform that consolidates portals, tools, and APIs into one intelligent interface — the single front door to Cisco Customer Experience (CX). It helps customers plan, deploy, manage, secure, and optimize technology investments.

Unified CX experience

Support and Professional Services together in one AI interface

Agentic intelligence

Agents adapt continuously to each customer's unique environment

40+ years of expertise

Institutional Cisco knowledge encoded and always available

Governed AI actions

AI surfaces insights; humans decide; Cisco remains accountable

LEADERSHIP PERSPECTIVE

“Cisco IQ is our boldest step yet in reimagining how customers interact with Cisco — from planning and design to optimization and transformation.”

Liz Centoni

EVP & Chief Customer Experience Officer, Cisco

Four pillars of Cisco IQ

01 Landscape Clarity

Real-time, benchmarked view of Cisco assets, configurations, and risks — including peer posture comparisons by industry and size.

02 Proactive Resilience

Surfaces and ranks critical risks before business impact. Not hundreds of alerts — a prioritized action list with evidence and reasoning.

03 Rapid Resolution

When a case opens, full environment context is already available. TAC briefs itself. Resolution can move from hours toward minutes.

04 Contextualized Services

Global expert experience is embedded into workflows across the lifecycle — helping projects land faster with less rework.

Core modules that deliver outcomes

Predictive Asset Insights

- Unified inventory tracking across the estate
- Lifecycle milestones and Last Day of Support planning
- Field notices and security advisories in one view
- Real-time visibility for planning conversations

Adaptive Assessments

- Security and configuration health checks
- Compliance and regulatory assessments
- Quantum readiness and custom checks
- Prioritized remediation plans with evidence

AI-Powered Support

- Consolidated view of cases and RMAs
- AI-assisted root cause analysis
- Environment-aware troubleshooting guidance
- Faster time to resolution for TAC and customers

Services Automation

- Digital requirements gathering
- Documentation automation for delivery teams
- Technology migration workflows
- Test, validation, and automation governance

One connected journey across the technology lifecycle

1. Plan

Assess readiness, risks, requirements, and quantum/compliance posture before investment decisions.

2. Deploy

Accelerate design and implementation with expert-aligned workflows and automation.

3. Manage

Maintain live inventory, operational health, lifecycle milestones, and support entitlement context.

4. Secure

Track advisories, configuration risk, and prioritized remediation with clear evidence.

5. Optimize

Benchmark peer posture, automate improvements, and prove measurable business outcomes.

Fits enterprise security and operating models

SaaS

Generally Available

- Fastest path to value
- Continuously updated cloud experience
- Secure connectivity to Cisco services
- Recommended default for most customers

On-Prem Tethered

Controlled hybrid

- Sensitive workloads stay local
- Connected for intelligence updates
- Balances control and currency
- Fits regulated hybrid estates

Air-Gapped

Maximum isolation

- Supports disconnected environments
- Strong governance boundaries
- Built for high-security zones
- Aligned to strict operating policy

What changes for customers

Hours → Minutes

Case resolution accelerates because environment context is already loaded when support starts.

Reactive → Proactive

Risks are ranked with evidence before outages, advisories, and compliance gaps become incidents.

Blind spots → Clarity

One inventory and advisory view replaces fragmented portals and partial spreadsheets.

Opinions → Proof

IT leaders get defensible data for infrastructure age, risk, and investment conversations.

Public signals and early customer impact

Customer example (Nestlé): Cisco IQ gave IT leaders defensible data to discuss aging infrastructure with business stakeholders — turning negotiation without evidence into a conversation with proof.

Cisco IQ vs. prior CX experience

Dimension	Previous CX model	Cisco IQ
Scope	Support-focused portal	Support + Professional Services, AI-native
Operating model	Often reactive / ticket-centric	Proactive, predictive, personalized
Intelligence	Tool-assisted workflows	Agentic AI adapted to environment
Access	Multiple portals & tools	One front door to CX resources
Business value	Resolve after impact	Prevent, prioritize, and prove outcomes

Start with the platform you already have

For existing Cisco Support & Professional Services customers, Cisco IQ is included.

1

Activate access

Enable Cisco IQ SaaS for entitled accounts and assign clear admin ownership.

2

Connect inventory

Bring assets and telemetry into landscape clarity for immediate visibility.

3

Run assessments

Prioritize security, configuration, compliance, and EOL exposures with evidence.

4

Operationalize support

Use AI-assisted cases so TAC starts with full environment context.

SUMMARY

From firefighting to foresight.

Cisco IQ turns 40 years of Cisco expertise into a continuous, proactive, AI-powered customer experience.
